Delta Mobile Systems' Embedded Android Processor Platform allows product designers to most quickly and cost-effectively provide rich user interface and connectivity for their products. Using a proven yet state of the art OMAP chipset and customizable Android code, a wide range of options in displays (up to 1080p), radios, and features can be integrated into a fully documented platform that can be customized for specific use cases.

By providing a platform for the latest release of Android and mobile devices with ability to customize and integrate dedicated functionality, this is a perfect solution to the challenge of providing and maintaining a leading edge user experience.

Delta Mobile also offers turnkey integration, application software support, and box-build manufacturing services.
